Customer Review Analyzer

Overview:

A restaurant is looking to improve its service and food quality. To do this, they need an automated tool that takes customer reviews, then categorize them either positive or negative to identify customer satisfaction and areas of improvement.

Mission:

1- Create a function `analyze_reviews(reviews)` that:

- Accepts **1 parameter**:
 1. **reviews**: a list of strings, each string represents one review.
- Checks for the presence of:
 - **Positive keywords**: ["good", "great", "fast", "helpful"]
 - **Negative keywords**: ["bad", "slow", "poor", "not"]
- For each review, it is classified:
 - **Positive** if it contains **at least one positive keyword** and **no negative keyword**.
 - Otherwise, mark it as **negative**.
- Returns **2 values**:
 1. Number of **positive** reviews.
 2. Number of **negative** reviews.

2- Make the review analyzer run **forever**. Ask the user to input reviews **separated by commas**.

3- After taking the reviews as input, you should print:

1. **Total number** of reviews.
2. Number of **positive** reviews.
3. Number of **negative** reviews.

4- Handle the case where **no reviews are entered**.

Bonus Part:

Calculate the **customer satisfaction ratio** using this formula:

$$\text{Satisfaction Ratio} = \frac{\text{Number of Positive Reviews}}{\text{Total Number of Reviews}} \times 100$$

Useful Hints:

- Use `.lower()` to normalize input for validation.
- Use `.split(',')` to convert the input string into a list of reviews.
- Loop through **each review**, then **each word in the review** to check keywords.

Expected Output:

- User inputs are highlighted by red
- The system response is highlighted by yellow

Enter reviews:

No reviews entered, try again!

Enter reviews: food was good, delivery was slow, staff was bad

Reviews count: 3

Positive reviews count: 1

Negative reviews count: 2

Satisfaction ratio: 33.33%

Enter reviews: service was great, staff was helpful, fries were not good

Reviews count: 3

Positive reviews count: 2

Negative reviews count: 1

Satisfaction ratio: 66.67%
