Escape the Room

Overview:

An entertainment business specializes in providing **Escape Room** adventures suitable for all ages starting from 7 years. They want to make a simple app to be used on a large screen in their reception by customers to know the prices.

Mission:

1- Build a **Streamlit app** that contains:

- A **title** → " 🎈 **Escape the Room** 🎈 "
- Display the following ticket prices in EGP as bullet points:
  1. For Kids → **150 EGP**
  2. For Adults → **120 EGP**
  3. For VIP → **200 EGP**
- Add a **selectbox** to display the ticket types (Kids – Adults - VIP).
- Add an **input field** to take the number of tickets from the user.

2- Calculate the **total cost** to the user based on the **selected ticket type** and **number of tickets** and then create a **button** to display the total when clicked.

Bonus Part:

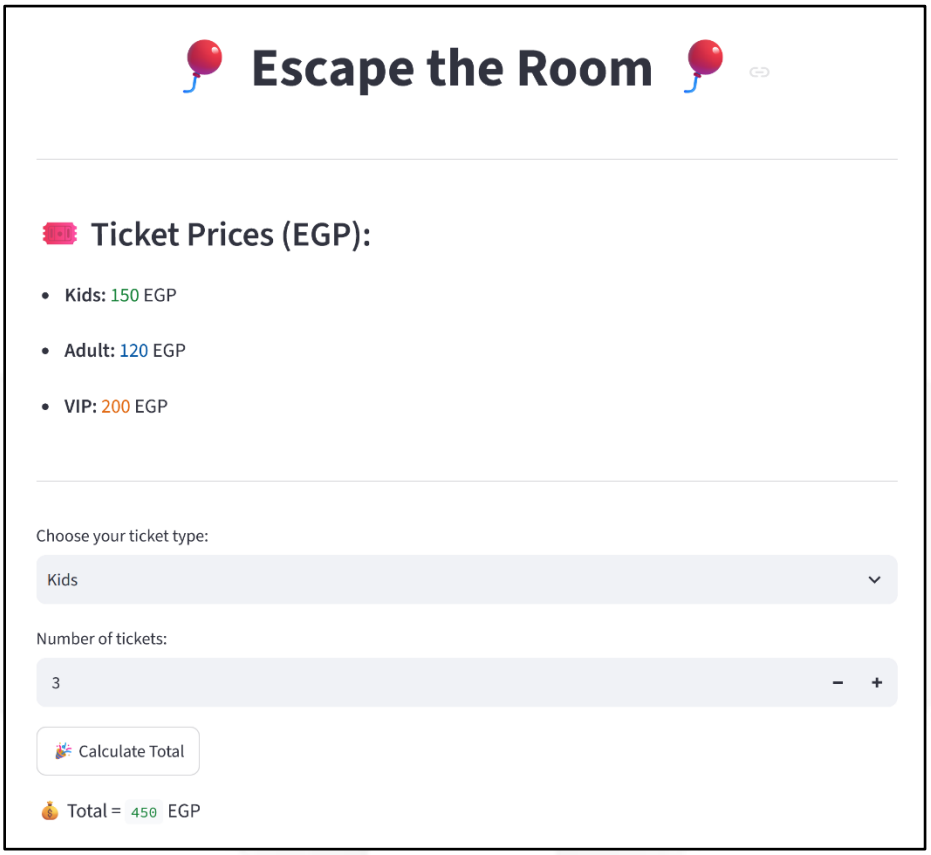

Edit the app to be in a **2-column layout** as shown in the output section.

Useful Hints:

- Use **st.divider()** to make a horizontal line and space between app sections.
- Use **:color-name[Text]** to color any text. Ex: **st.write(':green[150]').**
- To make **centered title,** add the **text_alignment** parameter inside them with the value **'center'**.

Expected Output:

- Displaying the price of **3 tickets** for **kids**:

- Displaying the price of **2 VIP tickets** with **bonus part** added:
