2026

Business Email Builder

Overview:

The technical team in a company named **BlazeX** wants to create a tool that automatically generates employee business emails. The tool collects employee information and creates an email address instantly using a fixed company format, eliminating manual email creation.

Mission:

1- Create a **Streamlit** app titled by **"BlazeX Email Creator"** that:

- Takes the following employee information:
  1. **First name** → As a **text input** with no more than **12** characters.
  2. **Last name** → As a **text input** with no more than **12** characters.
  3. **Phone number** → As a **text input** with **exactly 11** digits.
  4. **Department** → As a choice from a **selectbox** containing **6** different options as shown below.
- The **6 departments available** with their codes:

Department	Code
Technology	dev
Marketing	mkt
Operation	op
Finance	fin
Sales	sl
Human Resources	hr

2- Create the business email based on the following format:

`FirstName.LastName.department_code.last_2_digits_of_phone.random_2_digit_ID@BlazeX.com`

- **Email example** → ahmed.ali.hr.22.06@BlazeX.com

3- Add a **button** that's **when clicked**, the email is generated instantly.

Bonus Part:

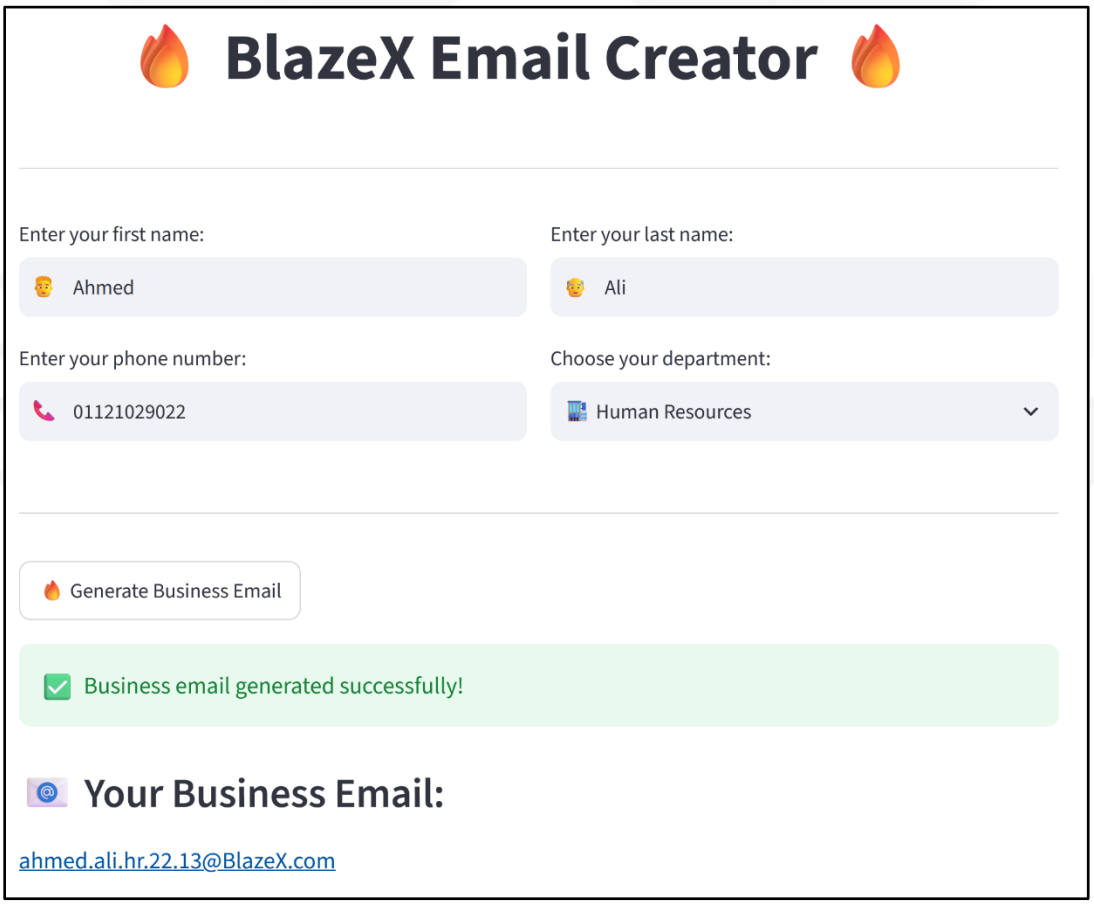

Use a **Streamlit function** that makes the generated business email **can be copied easily** as shown in the output section below.

Useful Hints:

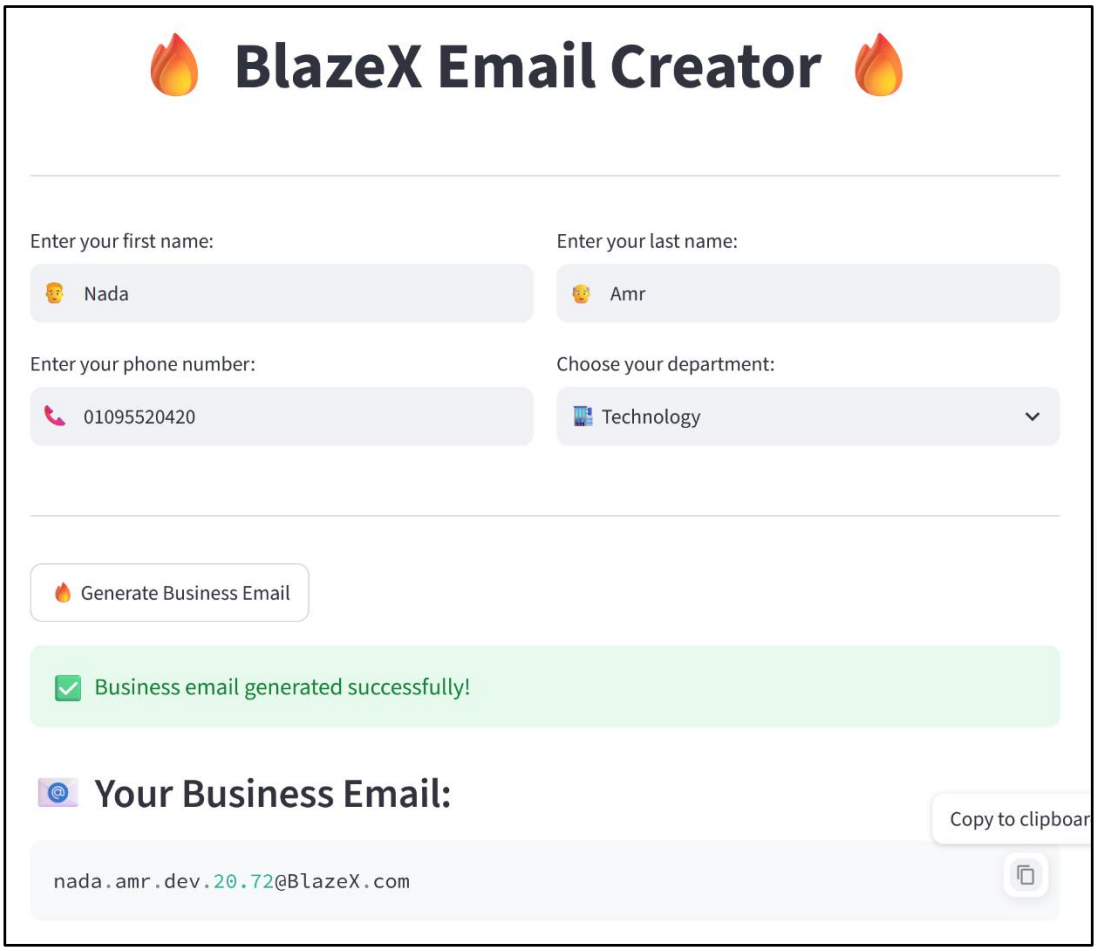

- Use the **random module** to easily generate the 2-digit ID.
- Use the **[-2:] slicing** to extract the last 2 digits in the phone number.
- Use the **icon parameter** to add icons to the input fields like 📞.

Expected Output:

- The **main app** layout without the bonus part:

- Another example with the **bonus part:**
